Allowable Subject Matter

Claims 3-7 and 10-13 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 3-7 and 10-13 are considered allowable because the present invention comprises a frame synchronization circuit having a first synchronizing unit for synchronizing to a first pattern in a first position of a received frame and a second synchronizing unit for synchronizing to a second pattern in a second position of the received frame. The frame synchronization circuit further includes a first error detection unit, which controls the first frame synchronizing unit to operate in accordance with the second position if the first position is different from the position of a first predetermined synchronization pattern. The closest prior art, Marutani (US Publication Number 2003/0161349 A1) teach a similar circuit including a first pattern synchronization unit and a second synchronization unit. However, Marutani fails to teach controlling the first synchronizing unit to operate in accordance with a second position if the position of the first synchronization unit is different than a first predetermined synchronization pattern. These distinct features have been included in independent claims 3, 4, 6, 7, 10, 11, and 13 rendering them allowable. Claims 5 and 12 are dependent upon allowed independent claims 4 and 11, and are thereby allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
